

Loan payments, split before they happen

For loans with a fixed payment schedule, WashRoute now creates the payment in Xero **ahead of time** — already split into principal and interest. When the real payment reaches the bank feed, all it needs from you is **one click on Match**. No more interest journals for these loans.

1 David approves it in WashRoute

Each upcoming payment appears in WashRoute with its split read straight off the lender's amortization schedule:

WASHROUTE — AWAITING APPROVAL

● PCV Good and Green Loan — 2026-09

Stage →

Split known ahead of time: \$5,357.75 principal, \$1,780.35 interest — ready to stage in Xero before the payment lands

He reviews the exact transaction that will be created, then clicks *Stage in Xero*.

2 The transaction waits in Xero, already split

A *Spend Money* transaction appears on the loan's account, dated the scheduled payment day, with the split already coded:

XERO — ACCOUNT TRANSACTIONS

Sep 1	Pacific Community Ventures · WR-STAGE 254 2026-09-01	7,138.10	Unreconciled
	PCV Good and Green Loan principal → 254		\$5,357.75
	Interest → 800 Interest Expense		\$1,780.35

Anything referenced `WR-STAGE ...` was created by WashRoute this way. It sits unreconciled — on purpose — until the payment arrives.

3 Payment day: your one click

When the payment shows up on the reconcile screen, Xero finds the waiting transaction and offers it under the **Match** tab:

BANK STATEMENT LINE

PACIFIC COMMUNITY VENTURES

\$7,138.10

Sep 1, 2026

→

✓ **MATCH FOUND**

WR-STAGE 254 2026-09-01

Already split: principal to 254, interest to 800

OK — Match

Click **Match** → **OK**, and the period is done: one clean two-line transaction, correct to the cent, nothing to journal later.

Do: click Match

The waiting transaction *is* the payment, pre-split. Matching it is the whole workflow.

Don't: click Create

Create makes a *second* transaction next to the staged one — the payment counted twice. (If it happens, WashRoute's watchdog flags it the same day; just tell David.)

If the payment doesn't match

A rate change, an extra payment, a skipped month — if the real payment differs from the schedule, Xero simply won't offer the match. Leave it alone: WashRoute notices the overdue stage, flags it, and removes it with one click, putting Xero back exactly as it was. Nothing for you to fix or work around.

Which loans work this way

Pacific Community Ventures (live now) — Verdant Capital and Dexter following once this first month proves out. These are the loans whose full amortization schedules are on file.

How to spot a staged transaction

Reference always reads `WR-STAGE <account> <date>`. If it carries that reference, WashRoute is managing it.

Everything else

Unchanged. Loans without schedules keep their current flow, and the usual "interest reallocation" journals continue for those.
